The Client

CMI Print Services Ltd is an SME based in Ipswich that specialises in hot foil printing services, printer refurbishment and maintenance.

Since 2005 we have established an on-going business relationship with CMI to provide on-demand CAD design services. This has mostly focused on the bespoke production of Heater Plates.

The Process

Through the completion of over 15 unique Heater Plates, the work process has been continually refined.

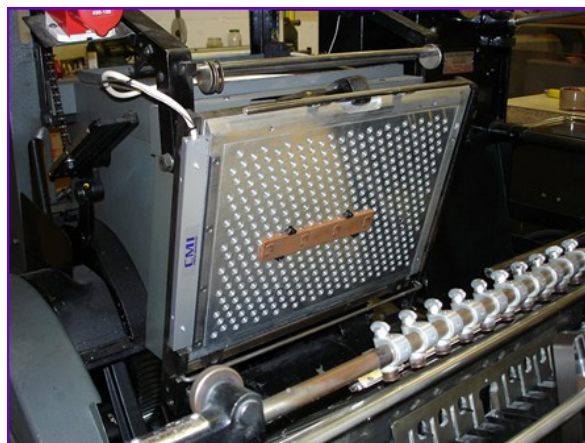

Typically, CMI supply the plate parameters and sketches of any special features.

We can then quickly respond to generate a draft layout for approval, before completing the final detailing and emailing back the manufacturing data.

The Finished Article

Having received the CNC manufactured Heater Plate from their supplier, CMI complete the instillation.

Our valued relationship enables us to understand each others requirements to efficiently deliver results — providing them with a competitive edge.

“H2H Enterprises have continually given us great service, creating a win-win relationship”

Mr D. Claxton
Managing Director CMI
